
Mitsubishi WD-73837

Posted by metalpro - 2009/07/02 15:23

I am new to this forum and find the content extremely useful.
Perhaps this model has been posted before, but I could not find tweak settings specific to a new Mitsubishi DLP:

Ref: WD-73837

Are the tweak settings similar to another model in this series that may be listed or can you offer the settings specific to this model?

Thanks for your help!

Hi metalpro,

I apologize for the delayed response. I am a technical consultant to Mitsubishi. I will post recommended settings soon on your model. For now use either Natural Mode or better yet Adv 1 Mode. That will give a reasonably accurate picture although professional calibration on a set of that caliber is highly recommended.

noob here.

Kevin, any update on settings for this model? I have one too. I applied some settings I found for other older mitsu dlps, which helped.

Thanks in advance.
