
Mitsubishi WD 73c9

Posted by adams5334 - 2009/12/10 17:20

Does anyone have the calibration settings for this TV?

Hi adams5334,

I have never seen this model. How old is it and what display technology is it?

Hello, This is a 73" dlp Mitsubishi. It is a new model this year. The model number may be exclusive to Costco. I think it may be similar to the WD73737. I just purchased it from Costco and I tried the settings for the WD 73737 and it is quite good. I was just wondering if there are even better calibration settings for this specific model.

adams5334

I will be calibrating this display this coming Friday and will submit the display profile for posting.

Please check back soon.

I found this display to be very decent for the price. Client is very happy.

Picture Modes

Picture Mode : Natural

Color Temperature : Low

Aspect Ratio : Standard

Picture Settings

Contrast : 58

Brightness : 33

Color : 31

Tint : 31

Sharpness : 31

Deep Field Imager : Off

Super Resolution : Off

Sharp Edge : Off

Video Noise : Off

Look for these settings to be officially posted later.

So how does the WD-73C9 compare to the WD-73737?

I'm on the fence between the WD-73C9 and the WD-73737 and the WD-73737 is like \$500 more and I'm not sure what the extra \$500 gets me? I think the WD-73737 is their Diamond Series and the WD-73C9 is a model made for Costco? Any info you have would be awesome... Thanks

Josh

Hi pruitjtj,

They are the same. The 737 is the entry level Medallion not the Diamond model. The 838 is the Diamond model and has much better black levels.

The new models will be out shortly and the second generation LaserVue will be out in May. I am at Mitsubishi this and next week, and I will do a Blog on the LaserVue next week.
