Hello, what a great website! I'm also looking for information on the TH-50PE8U. I am currently testing out the TH-50PX80U settings you have listed. I'm wondering if the fact that the TH-50PX80U is different because of the stated difference in contrast ratio between the two. The 50-PE8U is 10,000:1 and the 50-PX80U is 15,000:1. Otherwise, I think those two models are the same.

Calibration changes?

thanks!!!
