
Samsung PN50A460 - 50" Plasma TV

Posted by Danh26 - 2008/09/11 18:28

I'm wanting the best picture settings for the Samsung PN50A460.

Thanks much.

Hi Dan,

Thank you for your interest in Tweaktv. Unfortunately we don't have your exact model in our database, but we do have a similar one. We have the PN50A650. Try the settings at the link below and let us know what you think.

How soon would it take to get that exact model in your database? Also the one you suggested the settings for the PN50A650 model is that currently the closest match you have to the TV I have? I was on the High Def forums and one of the users on there suggested I try the PN50A550 settings. Is the PN50A650 more suitable for my model?

Hi Dan,

I am not sure of when we will have your exact model, but yes the A550 is the closest thing and should be more suitable than the A650 as it is closer to your model in the line. Give our settings a try and let us know what you think.

Please understand that the listing for adjustment parameters in the data base is acquired from hands-on experience by one or more of the moderators.

If we are not retained to calibrate that particular model, nor review it for one of the publications that TweakTV moderators are retained to review for, we don't have a path to getting the information.

Thanks for your understanding. :)

I have also purchased the Samsung pn50a460. Still in box. Do you recommend these setting for the "break in" time of 100-200 hours? If not what do you recommend?

Samsung plasmas are great, but not as good as the pioneer plasmas. I was so sad when i heard they were exiting the market
